

March 20, 2016

Dear Sir or Madam:

This letter is provided to verify that Francisco Vargas was a participant and attended the 2016 Facebook London Hackathon at our offices in London, United Kingdom on Saturday, March 11 to Sunday, March 12.

Francisco along with (4) other students: Robert Lacok, Fabien Florek, Marek Strelec, and Lukaš Danev formed Team Visualize Impact and took home the 2nd place prize. Their project was a prototype that predicted people's reactions of a Facebook post (before posting) by looking at similar already existing articles. Aim was complete and demo'ed. They demo'ed and trained on the BBC news facebook page

About Facebook London Hackathon

At Facebook, we believe that every engineer has a great idea within them. Hackathons are 24-hours of collaborative computer programming. It provides an opportunity for engineers to work on ideas and create something interesting by the end of the night. We have taken this tradition on campus to universities around the world so that students can gain programming experience and learn how to bring a product from an idea to a prototype overnight. Students participate in these events as a team, and the winning team of each on campus Hackathon is invited to fly out to Menlo Park California to participate against one another in the Hackathon Finals.

More information about our Hackathon Program is available at <http://www.facebook.com/hackathon>.

If you have any further questions regarding this event and Francisco's participation, please feel free to reach out to me via email: bambi@fb.com

Sincerely yours,

Bambi Mac
